

# Flowcode

## Return Code 1 - Flowcode v4 v5

Software : Flowcode PIC, AVR, ARM, dsPIC

---

### Symptoms :

---

When running Flowcode on a Windows 7 machine you may get a message stating Return Code 1 when ever you try to compile. This seems to be very common for Flowcode AVR and only very occasional for Flowcode PIC.

### Cause :

---

The problem seems to stem from Windows 7 access rights and seems to be a fundamental problem with the Windows library functionality. This problem can be seen when you try and save a file and you get a message saying you are not allowed. Then you try saving again and you can save correctly with no error message.

### Solution :

---

To fix the Return Code 1 compilation error then you will have to move the Flowcode project file to a library you have created. My Documents folder is in a library by default so you can use this location if you like. This fixes the problem for most cases.

Flowcode may still occasionally return the return code 1 error on a Windows 7 system but it will now be much less frequent. If this happens then you will need to close and restart Flowcode to allow it to function again.
