

# Flowcode

## Help File not working - Flowcode v4 v5

### Flowcode Help not working on Windows Vista / Windows 7:

Unfortunately when Microsoft released Windows Vista and Windows 7 they both used a different type of help file, and any programs that used the old \*.hlp files would find their help files would not work in these new operating systems, this includes Flowcode.

However there is a fix from Microsoft and a download for the WinHlp32.exe which should fix the help file problem.
