Gettin ASM for PICs working with 64bit Windows

One problem that ASM for PICs has on 64 bit machines is that the VPIC exerices do not launch directly from the course itself, to fix this issue we must change 2 files over to new ones made for use on 64bit machines.

- First download the fix pack from here:

[ASM for PICs Fix Download](#)

- Extract the contents of the file to a location on your computer where you have read/write privileges (eg Desktop / My Documents).
- Next take the ASM4PICsV4.exe and content.mcourse and copy them into the folder where ASM4PICs is installed. The default location for this is:
C:\Program Files (x86)\Matrix Multimedia\ASM4PICsV4
- <Note>You may want to move the original versions of these files into a different location to keep copies of them.

You will want to recreate your shortcuts for the new files, right click on the ASM4PICsV4.exe and click on "Create Shortcut" to create a shortcut on the desktop.

Unique solution ID: #1032
