

Misc

LCD initialisation information is wrong

Software : ELPIC103, ELPICSI3, ELPICSL3 - ASM for PICmicros V3

Symptoms :

LCD initialisation information on the datasheet is wrong.

Cause :

If you look at the datasheet for the KS0066U controller, the commands used to initialise the LCD display in ASM4PICs, C4PICs and FlowCode are not present.

Solution :

The correct initialisation sequence can be found on p27 of the KS0066U controller datasheet. The wierd thing is that the non-existent commands we listed actually initialise the LCD display correctly as well.

Unique solution ID: #1035
